

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at line 21 of page 6 with the following paragraph:

Using a plurality of extrusions to form a photovoltaic module frame with air vents advantageously simplifies the manufacturing, shipping, and assembly of the frame. It is to be understood, however, that the frame may also comprise a single piece with a top or bottom opening, for example. The ~~frame~~ frame may also have any number of pieces and not necessarily four as in the provided examples. The frame may have frame members other than extrusions. Such frame members or framing may incorporate air vents, and mounting portions similar to the presently disclosed extrusions.
